

What's the difference between GU11 and GU10?

Size:

GU11 bases are the same as GU10 bases. The pins are spaced the same distance apart, and they fit into the same lamp holders.

The diameter of the face of GU11's are smaller than that of a GU10. GU11 LED bulbs have a diameter of 35mm and GU10 diameter of 50mm.

Applications:

GU11 is commonly used for discrete accent lighting, task lighting, and decorative fixtures where a smaller lamp is required.

GU10 is used in a wide range of applications, including track lighting, recessed lighting, spotlights, and general-purpose lighting in both residential and commercial settings.
